# Smart Use of Smart Devices in Your Home

## Smart Home Dos and Don'ts

A smart home consists of interconnected devices that help automate your home. These benefits come with potential risks. Protect yourself and your family by securing the lifecycle of each device in your smart home!

# When

Getting the device

**Do:** Purchase from reputable manufacturers with a history of supporting security & privacy

Read reviews from trusted sources before buying

**Don't:** Purchase "off-brand devices" from unknown manufacturers, since they may not have security and privacy features

# When

Installing the device

**Do:**

Create **long** and **unique** **passphrases** using **random words** for each of your smart home accounts

Use a **password manager** to help generate and remember these passphrases

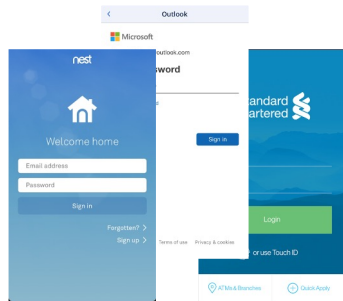

Enable **two-factor authentication** for your accounts

**Don't:**

Use passwords based on **easily available information**, **reuse** them across multiple accounts, or make them **short enough to be guessed**

hunter2

# When

Using the device

To prevent **unauthorized local access** to devices...

**Do:**

Enable **guest mode** and/or **parental controls** when hosting guests or visitors

To prevent **unauthorized remote access** to devices...

**Do:**

Enable **automatic software updates** for your devices

**Don't:**

**Assume** guests know your **expectations** for your smart home

Make yourself at home!

but...

**Don't:**

Use devices with known **unresolved vulnerabilities**
